PERTH'S DECORATIVE CONCRETE SPECIALIST

CHECK LIST

This is 2-Smooth's check list when installing concrete. Please be aware are your other quotes as thorough as we are!

- The site clear of all debris and fully compacted (with compaction certificates available)
- 200mm Black polythene membrane to be laid to stop ants, weeds, moisture.
- Plastic sheeting to be applied where necessary to protect walls/windows/fences.
- Every square metre of concrete has steel mesh installed and tied correctly. This will help bond the centre of the slab together. Without mesh eventually it will crack and separate.
- Foam expansion installed to assist in the drying process to help minimise offset cracking.
- All formwork to be placed so a full 100mm of concrete is achieved. (Don't be fooled by amateurs offering anything less than this.)
- All control joints must be cut via machine within 18hrs of concrete being installed
- The concrete is to be pressure cleaned or acid washed, than allowed to dry for approx. 48hrs before using a high quality solvent sealer.
